Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

1: PIR.65:*
2: PIR1:*
3: PIR3:*
4: PIR4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

ALIGNMENTS

RESULT 1
S43627
cytochrome-c oxidase (EC 1.9.3.1) chain Vb-H - trout (fragment)
C:Species: Salmo sp. (trout)
C:Date: 19-Mar-1997 #sequence_revision 01-Aug-1997 #text_change 02-Jul-1998
C:Accession: S43627
R:Freund, R.; Kadenbach, B.
Eur. J. Biochem. 221, 1111-1116, 1994
A:Title: Identification of tissue-specific isoforms for subunits Vb and VIIa of cytochrome c oxidase
A:Reference number: S43624; MUID:94237150
A:Accession: S43627
A:Status: Preliminary
A:Molecule type: protein
A:Residues: 1-20 <FR>
C:Keywords: electron transfer; membrane-associated complex; oxidoreductase; respirato

Query Match 27.0%; Score 27; DB 2; Length 20;
Best Local Similarity 44.4%; Pred. No. 4.1e+02;

CC apolipoprotein A-I (apoA-I) agonist (B) that is a peptide, or analog,
 CC which forms an amphipathic alpha-helix in presence of lipids. (A),
 CC optionally as a complex with lipids, and host cells that contain (A),
 CC are useful for gene therapy, or prevention, of diseases associated with
 CC dyslipidemia, specifically hypercholesterolemia, cardiovascular disease,
 CC atherosclerosis, restenosis, HDL (high density lipoprotein) and apoA-I
 CC deficiency, hypertriglyceridemia and metabolic syndrome. also to treat
 CC endotoxemia (septic shock). Host cells containing (A) can also be used
 CC to study the role of apoA-I in lipid metabolism. (B) can be used
 CC diagnostically, e.g. to measure serum HDL (particularly its
 CC subpopulation involved in retrograde cholesterol transport) and for
 CC imaging the circulatory system or HDL accumulations at fatty streaks.
 CC The present sequence represents a peptide from the present invention.

 Peptide agonists of apolipoprotein A-I
 Clam 19; Page 157; 280pp; English.
 The present invention describes an agonist (A) of apolipoprotein A-I
 (apoA-I) which is a 15-29 residue peptide, or analog, that forms an
 amphipathic alpha-helix in presence of lipids. (A), and their lipid
 complexes, are used to treat or prevent diseases associated with

CC dyslipidemia, specifically hypercholesterolemia, cardiovascular disease,
 CC atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I
 CC deficiency; hypertriglyceridemia and metabolic syndrome, also for
 CC treating septic shock. When labeled, (A) can also be used diagnostically
 CC to measure serum levels of HDL, in particular the HDL subpopulation that
 CC is involved in retrograde cholesterol transport, also to image HDL at
 CC e.g. atherosclerotic streaks, and to raise antibodies. Y19188 to Y19441
 CC represent lectin:cholesterol acyltransferase (LCAT) activity
 CC exhibiting core peptides, which are apoA-I agonists.

 Controlling the availability and/or signal transduction capability
 of a cell surface receptor, useful for treating growth hormone
 deficiencies
 Disclosure: Page 9; 36pp; English.
 This sequence is a polypeptide from the mammalian prolactin receptor.
 Sequences (Y32794-Y32823) are examples of polypeptide sequences found at
 or near the ubiquitin/proteasome complex binding site located on the
 intracellular part of a cell surface receptor. These sequences are used
 in a method for controlling the availability and signal transduction
 capability of a cell surface receptor by administering an inhibitor that
 is capable of inhibiting proteolytic cleavage of the receptor. Inhibition
 of this proteolytic cleavage results in the receptors being present on
 the surface for longer and therefore signalling for longer to the
 interior of the cell. This increases the sensitivity of cells to any
 hormones which might be present. The inhibitor is either derived from,
 CC competes with or binds to a polypeptide sequence of which sequences
 Y32794-Y32823 are examples. The inhibitor may be used to treat muscle
 wasting, associated with disorders such as renal tubular defects,

 PT New human secreted proteins and coding sequences useful for treating
 PT disorders of the immune system and hyperproliferative disorders
 PS
 PS Disclosure: Page 119; 507pp; English.
 XX
 CC This sequence represents a secreted human protein encoded by the gene
 CC clone detailed in the descriptor line. The gene can be used to generate
 CC fusion proteins by linking to the gene to a human immunoglobulin Fc
 CC portion (e.g. X84924) for increasing the stability of the fused protein
 CC as compared to the human protein only.
 CC The invention relates to 125 novel genes and their fragments (nucleic
 CC acid sequences: X84933-X85057; amino acid sequences Y27567-Y27933) which
 CC are useful for preventing, treating or ameliorating medical conditions
 CC e.g. by protein or gene therapy. Also, pathological conditions can be
 CC diagnosed by determining the amount of the new polypeptides in a sample
 CC or by determining the presence of mutations in the new polynucleotides.
 CC Specific uses are described for each of the 125 polynucleotides, based on
 CC which tissues they are most highly expressed in (see X84933 for described
 CC uses).

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial
 PT infection, especially by Staphylococci and Streptococci
 PS
 PS Example 8; Page 101; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding
 CC the isolated peptide of (1). Antibodies, the isolated peptides of
 CC (1) and the nucleic acids are all useful for immunisation (active or
 CC passive) and (by inhibiting binding of bacteria to fibronectin) for
 CC preventing or treating infection in humans or other animals, particularly
 CC by staphylococci or streptococci, e.g. meningitis, otitis media,
 CC pneumonia, endocarditis, mastitis in cattle, abortion in horses and many
 CC others. Since the antibodies block binding of bacteria, they should be
 CC effective against antibiotic-resistant strains, and may replace
 CC antibiotic therapy or increase its effectiveness. Sequences W65670-90
 CC represent a series of synthetic peptides based on the D3 repeat of
 CC S. aureus fibronectin binding protein A. They were synthesised to contain
 CC a proline residue at each position through the sequence (ie a proline
 CC scan).

 PT Multi-class hybrid interferon poly:peptide(s) - with restricted
 PT antiviral and cell growth regulatory activities
 XX
 XX Example: Fig 17: 61pp; English.
 CC The inventors claim a multiclass hybrid interferon polypeptide and a
 CC DNA unit having a nucleotide sequence which encodes it. Pref. the
 CC AA sequence consists of alpha and beta interferons. Pref. IF1 is
 CC (1) the 1-73 AA seq. of HuIFN-alpha-1 (and IF2 is the 74-166 AA seq.
 CC of HuIFN-beta-1) (see N30155, P30222); or (ii) the 1-41 AA seq. of
 CC HuIFN-alpha-61A (and IF2 is the 43-166 AA seq. of HuIFN-beta-1) (see
 CC N30160, P30227). Alternatively IF1 is the amino terminal end of a
 CC beta-IF and IF2 is the carboxy terminal of an alpha-IF (esp. the
 CC 1-73 seq. of HuIFN-beta-1 and the 74-167 seq. of HuIFN-alpha-1
 CC resp.) (see N30156, P30223). In the examples plasmids pGM5 and
 CC pDM101/crip/beta-1 and p-alpha-61A were used (see N30151, N30152,
 CC N30157). Hint1 was used to digest the DNA sequences in the region
 CC of significant handicaps (see N30153, N30154, N30158, N30159), and
 CC the restriction fragments were ligated to form hybrid DNA.

 PT Multi-class hybrid interferon poly:peptide(s) -

PT having sequence from interferon-alpha-1 and sequence from
 PT interferon-beta-1 for restricted activity
 XX
 XX Example: Fig 17: 24pp; English.
 CC Multi-class hybrid IFN polypeptides having an AA sequence composed
 CC of 2 distinct subsequences are claimed. The plasmids used in the
 CC construction of huIFN-alpha-61A-beta-1 hybrid are plasmids palpha61A and
 CC pDM101/crip/beta-1. Assembly of the palpha61A plasmid involved replacing
 CC the DNA fragment encoding the 23 AA signal polypeptide of preinterferon
 CC with a 120BP EcoRI/Sau3A promoter fragment E. coli trp promoter, operator,
 CC and trp leader ribosome binding site preoperator, encoding an Arg
 CC initiation codon and using HindIII site that was inserted, 59 nucleotides
 CC 3'-end of the TGA translational stop codon, to insert the gene into the
 CC plasmid pBM11 (a deriv of pBR322 having a deletion between the HindIII
 CC and PvuII sites). The complete DNA sequence of the promoter and gene
 CC fragments inserted between the EcoRI and HindIII sites of pBM11 is shown
 CC in n80049. The hybrid gene was constructed by taking advantage of the
 CC homologues between huIFN alpha-61A & huIFN beta-1 at around AA 40 of both
 CC proteins. The DNA sequence 5'-proximal to the DdeI restriction enzyme
 CC cutting site of the huIFN alpha-61A DNA is ligated to the DNA sequence
 CC 3'-proximal to the site of huIFN beta-1, to create a fusion of the
 CC two genes while preserving the translational reading frame of both.

PT New artificial T helper cell epitope and derived immunogens with target
PT antigenic site, for immunization against e.g. malaria, arteriosclerosis
PT or human immune deficiency virus
XX
PS Claim 10; Page 50; 129pp; English.
XX
CC The invention relates to novel promiscuous T helper cell epitopes (Th),
CC and immunogenic peptides comprising the Th epitopes of the invention
CC along with B cell epitopes. The Th epitopes and peptide immunogens
CC containing them, are used to induce a T helper cell response,
CC specifically against Plasmodium falciparum, cholesterol ester transport
CC protein (CERP) or HIV epitopes, but more generally against any pathogen,
CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
CC peptide immunogens may be used for prevention and/or treatment of
CC infections (HIV, foot-and-mouth disease or malaria); for cancer
CC immunotherapy; for inhibition of the action of luteinizing hormone
CC releasing hormone (LHRH) for contraception, treatment of hormone-
CC dependent cancer, prevention of boar taint in meat, and
CC immunocastration; for promoting the growth of animals; or for
CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
CC Th (functional in genetically diverse subjects) into an immunogen
CC improves capacity to induce a strong T helper cell-mediated immune
CC response, resulting in production of antibodies against a target antigen.
CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
CC Sequence Y91121 represents a promiscuous T helper epitope from the
CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
CC synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
CC antigenic peptide used in these LHRH antigenic peptides. Y91200 is
CC somatostatin and a Th epitope. Somatostatin immunogens may be used
CC to promote growth in livestock. Y91208 is a human CD4 CD2-1-like domain
CC antigenic site, and Y91209-Y90211 are MVF Th epitope/CD4 CD2
CC antigenic peptides which may be used to prevent HIV infection of T
CC cells. Y90212 is a modified version of a human IgE (immunoglobulin
CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IgE CH3 antigenic

CC peptides which may be used in the treatment of allergies. Y91220 is
CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
CC Y91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be
CC used in a malaria vaccine. Y91228-Y91231 represent CERP-derived peptides
CC and Y91232-Y91241 are immunogens comprising a CERP peptide and a Th
CC epitope which may be used to prevent or treat arteriosclerosis and
CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
CC peptides comprising MVF Th and HIV-1 B-cell epitope which may be used as
CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
CC an immunostimulatory invasion protein epitope from Yersinia species, and
CC hinge spacer peptide, both of which may optionally be used in the
CC antigenic peptides of the invention.

XX
PS Claim 10; Page 62; 129pp; English.
XX
CC The invention relates to novel promiscuous T helper cell epitopes (Th),
CC and immunogenic peptides comprising the Th epitopes of the invention
CC along with B cell epitopes. The Th epitopes and peptide immunogens
CC containing them, are used to induce a T helper cell response,
CC specifically against Plasmodium falciparum, cholesterol ester transport

CC This sequence represents an immunogenic fragment of the rabbit
 CC cholesterol ester transferase protein (CETP).
 CC The invention relates to recombinant DNA vaccines that contain DNA
 CC encoding CETP, which can be used for producing antibodies to lessen the
 CC transfer of cholesterol esters from high density lipoprotein (HDL). The
 CC method can provide an autogenic immunological process for lessening the
 CC transfer of cholesterol esters from HDL particles and for increasing the
 CC HDL cholesterol concentration of a mammal whose blood also contains
 CC CETP. The method may be useful in treating human pro-atherogenic
 CC dyslipoproteinaemias characterised by low HDL/LDL cholesterol ratios. The
 CC method can have an effect that lasts for months as compared to the
 CC short-term effects of the small molecule drugs now available.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: IN RESPONSE TO LOWERED BLOOD PRESSURE, THE ENZYME RENIN
 CC CLEAVES ANGIOTENSIN I, FROM ANGIOTENSINOGEN. ACE (ANGIOTENSIN
 CC CONVERTING ENZYME) THEN REMOVES A DIPEPTIDE TO YIELD THE
 CC PHYSIOLOGICALLY ACTIVE PEPTIDE ANGIOTENSIN II, THE MOST POTENT
 CC PRESSOR SUBSTANCE KNOWN, WHICH HELPS REGULATE VOLUME AND MINERAL
 CC BALANCE OF BODY FLUIDS.
 CC -1- TISSUE SPECIFICITY: MADE IN THE LIVER & SECRETED IN THE PLASMA.
 CC -1- SIMILARITY: BELONGS TO THE SERPIN FAMILY.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX
XX New human secreted proteins and coding sequences useful for treating
XX disorders of the immune system and hyperproliferative disorders
XX
XX Disclosure: Page 119; 507pp; English.
PS
XX This sequence represents a secreted human protein encoded by the gene
XX clone detailed in the descriptor line. The gene can be used to generate
XX fusion proteins by linking to the gene to a human immunoglobulin Fc
XX portion (e.g. X84924) for increasing the stability of the fused protein
XX as compared to the human protein only.
XX The invention relates to 125 novel genes and their fragments (nucleic
XX acid sequences: X84933-X85057; amino acid sequences Y27567-Y27933) which
XX are useful for preventing, treating or ameliorating medical conditions
XX e.g. by protein or gene therapy. Also, pathological conditions can be
XX diagnosed by determining the amount of the new polypeptides in a sample
XX or by determining the presence of mutations in the new polynucleotides.
XX Specific uses are described for each of the 125 polynucleotides, based on
XX which tissues they are most highly expressed in (see X84933 for described
XX uses).

XX
XX      PT      Multi-class hybrid interferon poly:peptide(s) - with restricted
XX      PT      antiviral and cell growth regulatory activities
XX
XX      Example: Fig 17; 61pp; English.
XX
XX      The inventors claim a multiclass hybrid interferon polypeptide and a
XX      CC      DNA unit having a nucleotide sequence which encodes it. Pref. the
XX      CC      AA sequence consists of alpha and beta interferons. Pref. IF1 is
XX      CC      (1) the 1-73 AA seq. of HuIFN-alpha-1 (and IF2 is the 74-166 AA seq.
XX      CC      of HuIFN-beta-1) (see N30155, P30222); or (11) the 1-41 AA seq. of
XX      CC      HuIFN-alpha-61A (and IF2 is the 43-166 AA seq. of HuIFN-beta-1) (see
XX      CC      N30160, P30227). Alternatively IF1 is the amino terminal end of a
XX      CC      beta-IF and IF2 is the carboxy terminal of an alpha-IF (esp. the
XX      CC      1-73 seq. of HuIFN-beta-1 and the 74-167 seq. of HuIFN-alpha-1
XX      CC      resp.) (see N30156, P30223). In the examples plasmids pcw5 and
XX      CC      pDM101/crfp/beta-1 and p-alpha-61A were used (see N30151, N30152,
XX      CC      N30157). HinfI was used to digest the DNA sequences in the region
XX      CC      of significant handicaps (see N30153, N30154, N30158, N30159) and
XX      CC      the restriction fragments were ligated to form hybrid DNA.

PT		Multi-class hybrid Interferon polypeptide(s) -	
XX		having sequence from interferon-alpha-1 and sequence from	
XX		interferon-beta-1 for restricted activity	
PS		Example: Fig 17; 24pp; English.	
CC			
CC		Multi-class hybrid IFN polypeptides having an AA sequence composed	
CC		of 2 distinct subsequences are claimed. The plasmids used in the	
CC		construction of huIFN-alpha-61A-beta-1 hybrid are plasmids palpa61A and	
CC		pDM101/crp/beta-1. Assembly of the palpa61A plasmid involved replacing	
CC		the DNA fragment encoding the 23 AA signal polypeptide of preinterferon	
CC		with a 120BP EcoRI/Sau3A promoter fragment E.coli trp promoter, operator,	
CC		and trp leader ribosome binding site preoperator, encoding an ATG	
CC		initiation codon and using HindIII site that was inserted, 59 nucleotides	
CC		3'-end of the TGA translational stop codon, to insert the gene into the	
CC		plasmid pMW1 (a deriv of pBR322 having a deletion between the HindIII	
CC		and PvuII sites). The complete DNA sequence of the promoter and gene	
CC		fragments inserted between the EcoRI and HindIII sites of pMW1 is shown	
CC		in n80049. The hybrid gene was constructed by taking advantage of the	
CC		homologies between huIFN alpha-61A & huIFN beta-1 at around AA 40 of both	
CC		proteins. The DNA sequence 5'-proximal to the DdeI restriction enzyme	
CC		cutting site of the huIFN alpha-61A DNA is ligated to the DNA sequence	
CC		3' proximal to the site of huIFN beta-1, to create a fusion of the	
XX		two genes while preserving the translational reading frame of both.

 PT Stimulating an immune response to increase high density lipoprotein
 PT - avoids repeated administration of toxic drugs to lower cholesterol
 PT ester transfer protein levels
 XX
 PS Claim 5; Page 16; 26pp; English.
 XX
 CC The sequences given in W24292-94 were used in the method of the
 CC invention to stimulate an immune response to increase high density
 CC lipoprotein (HDL) cholesterol in a mammal exhibiting low levels of
 CC serum HDL. These peptides represent immunogenic epitopes of
 CC cholesterol ester transfer protein (CERP). The method utilises
 CC the body's own immune system to lower CERP levels, thereby increasing
 CC the level of beneficial HDL cholesterol, preferably in serum. The
 CC method avoids the problems associated with the repeated administration
 CC of drugs which have undesirable side effects. This peptide represents
 CC a region of CERP which is common to both human and rabbit proteins.

 PT Identifying cell signalling and growth regulatory polypeptides by
 PT reaction with multivalent recognition complex - polypeptides are
 PT useful in targeted drug selection
 XX
 PS Disclosure: Fig 15C; 220pp; English.
 XX
 CC Peptides W38068-92 contain PPPPY-like motifs. The PPP motif is
 CC found in the proline rich regions of WBP-1 and WBP-2 proteins. Peptides
 CC containing this residue have been shown to bind the YAP WW domain, but
 CC not the WW domain from dystrophin or to a panel of SH3 domains. Peptides
 CC W38068-92 were biotinylated and complexed with alkaline streptavidin,
 CC and used in a cross affinity mapping experiment. They were tested for
 CC their ability to bind to the 3 WW domains of WMP4 (W36797), which were
 CC expressed as glutathione-S-transferase expression proteins. The present
 CC peptide, derived from Prkacg (sic), binds to some of the WW domains
 CC of the novel protein. The WW domain is a small functional domain. Its
 CC name is derived from the observation that two tryptophan residues, 1 in
 CC the amino terminal portion of the WW domain and 1 in the carboxyl
 CC terminal portion, are conserved. Most proteins containing WW domains
 CC have a function involving cell signalling and growth regulation or the
 CC organisation of the cytoskeleton. Polypeptides containing a WW domain are
 CC identified by treating a multivalent recognition unit complex that has
 CC selective binding affinity for a WW domain, with many polypeptides and
 CC identifying those with selective affinity for the complex. Proteins
 CC containing WW domains are used for targeted drug screening, i.e. to
 CC identify potential modulators of specific WW domain interactions.

 PT Cholesteryl ester transfer protein B cell epitope linked to T cell
 PT epitope used to generate vaccine to regulate CERP activity for
 PT decreasing the risk of developing a cardiovascular disease e.g.
 PT atherosclerosis
 XX
 PS
 Claim 5; Page 41; 72pp; English.
 XX
 XX A B-cell epitope (W06128) comprising the C-terminal 26 amino acids
 CC of human liver mature cholesteryl ester transfer protein (CERP)
 CC (see also W06127) is involved in a neutral lipid binding or a
 CC transfer activity of CERP. It can be linked to a universal or
 CC broad range immunogenic T-cell epitope, such as that found at amino
 CC acids 830-843 of tetanus toxoid protein, to produce a synthetic
 CC vaccine (see also W06129) that elicits an immune response against
 CC endogenous CERP activity, thereby treating or preventing
 CC cardiovascular disease, such as atherosclerosis. It may also be
 CC incorporated into a multivalent vaccine (see also W06131)
 CC including another CERP B-cell epitope.
 XX
 XX Sequence 26 AA:
 SQ

XX Claim 15; Page 85; 99pp: English.

XX This sequence represents an immunogenic fragment of the rabbit

CC cholesteryl ester transferase protein (CEPT).

CC The invention relates to recombinant DNA vaccines that contain DNA

CC encoding CEPT, which can be used for producing antibodies to lessen the

CC transfer of cholesteryl esters from high density lipoprotein (HDL). The

CC method can provide an autogenous immunological process for lessening the

CC transfer of cholesteryl esters from HDL particles and for increasing the

CC HDL cholesterol concentration of a mammal whose blood also contains

CC CEPT. The method may be useful in treating human pro-atherogenic

CC dyslipoproteinaemias characterised by low HDL/LDL cholesterol ratios. The

CC method can have an effect that lasts for months as compared to the

CC short-term effects of the small molecule drugs now available.

 PT New artificial T helper cell epitope and derived immunogens with target
 PT antigenic site, for immunization against e.g. malaria, arteriosclerosis
 PT or human immune deficiency virus
 XX
 PS Claim 10: Page 62: 129pp: English.
 XX
 CC The invention relates to novel promiscuous T helper cell epitopes (Th),
 CC and immunogenic peptides comprising the Th epitopes of the invention
 CC along with B cell epitopes. The Th epitopes and peptide immunogens
 CC containing them, are used to induce a T helper cell response,
 CC specifically against Plasmodium falciparum, cholesterol ester transport
 CC protein (CETP) or HIV epitopes, but more generally against any pathogen,
 CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
 CC peptide immunogens may be used for prevention and/or treatment of

CC infections (HIV, foot-and-mouth disease or malaria); for cancer
 CC immunotherapy; for inhibition of the action of interleukin hormone
 CC releasing hormone (LRHR) for contraception, treatment of hormone-
 CC dependent cancer, prevention of boar taint in meat, and
 CC immunocastration); for promoting the growth of animals; or for
 CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
 CC Th (functional in genetically diverse subjects) into an immunogen
 CC improves capacity to induce a strong T helper cell-mediated immune
 CC response, resulting in production of antibodies against a target antigen.
 CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
 CC Sequence Y91121 represents a promiscuous T helper epitope from the
 CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
 CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
 CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
 CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
 CC synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
 CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LRHR
 CC sequence joined to a promiscuous Th epitope. Y91197 is the LRHR target
 CC antigenic peptide used in these LRHR antigenic peptides. Y91200 is
 CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising
 CC somatostatin and a Th epitope. Somatostatin immunogens may be used
 CC to promote growth in livestock. Y91208 is a human CD4 CDR2-like domain
 CC antigenic site, and Y91209-Y90211 are MVH Th epitope/CD4 CDR2
 CC antigenic peptides which may be used to prevent HIV infection of T
 CC cells. Y90212 is a modified version of a human IgE (immunoglobulin
 CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IgE CH3 antigenic
 CC peptides which may be used in the treatment of allergies. Y91220 is
 CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
 CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
 CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
 CC Y91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be
 CC used in a malaria vaccine. Y91228-Y91231 represent CETP-derived peptides
 CC and Y91232-Y91241 are immunogens comprising a CETP peptide and a Th
 CC epitope which may be used to prevent or treat arteriosclerosis and
 CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
 CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
 CC peptides comprising MVH Th and HIV-1 B-cell epitope which may be used as
 CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
 CC an immunostimulatory Invasin protein epitope from Yersinia species, and
 CC hinge spacer peptide, both of which may optionally be used in the
 CC antigenic peptides of the invention.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Regulators of cellular gene transcription - useful in pharmaceutical
 PT compsns. for preventing or treating diseases due to unregulated DNA
 PT DNA transcription

XX Disclosure: Page 29; 132pp; English.

XX The sequences given in R6127-316 represent peptides which are derived
 CC from the HTLV transactivating protein, Tax. These peptides were
 CC preferably synthesised as C-terminal amides, and are not acylated on
 CC the N-terminus. These peptides may be used as regulators of host
 CC cell transcription, as they modulate other protein-protein inter-
 CC actions which regulate transcription in a cell. These peptides
 CC inhibit gene transcription in a viral host cell which is subject to
 CC regulation by proteins or factors that originate from a virus.
 CC These peptides specifically act by blocking a binding site, or by
 CC mimicking or stimulating binding characteristics of the target molecule.

XX Trans-activating factor inhibitory peptide(s) - comprising fragments
 PT of Tax protein

XX Example 1; column 41-42; 43pp; English.

XX This sequence represents a fragment of the Tax protein of human T-cell
 CC leukaemia virus (also known as human lymphotropic virus). This sequence
 CC is used in the trans-activating factor inhibitor of the invention, that
 CC inhibits Tax-dependent transcription. The inhibitors can be used to
 CC inhibit transcription of DNA that codes for proteins that can be harmful
 CC to mammals, especially humans, e.g. to treat viral infections (e.g.
 CC HTLV-I infections or hepatitis B), genetic disorders (e.g. homozygous
 CC familial hypercholesterolaemia) or cancer.

PT Phosphorylated receptor peptide binds STAR transcription factor -
 PT has a Tyr-contg. region of an intracellular domain of, e.g. a
 cytokine, for screening for agents which bind to the receptor
 XX
 PS Claim 4; Page 39; 55pp; English.
 XX
 CC This sequence represents the fragment Lys433 to Asp448 of the
 CC intracellular region of the interferon-gamma receptor protein. This
 CC peptide represents a Tyr-containing region which is capable of being
 CC phosphorylated, and can then bind a cytoplasmic transcription factor
 CC of the signal transducers and activators of transcription (STAT)
 CC family. This peptide specifically binds to STAT1alpha. Receptor
 CC peptides such as this, may be used to screen for molecules which
 CC interact with it, and for molecules which inhibit or promote an
 CC interaction between the receptor peptide and the identified molecule.

 XX Antibody that binds to fibronectin-binding protein, preventing its
 XX binding to fibronectin - used to treat or prevent bacterial
 XX infection, especially by Staphylococci and Streptococci
 XX
 XX Example 2; Page 92; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of a
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding
 CC the isolated peptide of (1). Antibodies, the isolated peptides of

CC (1) and the nucleic acids are all useful for immunisation (active or
 CC passive) and (by inhibiting binding of bacteria to fibronectin) for
 CC preventing or treating infection in humans or other animals, particularly
 CC by staphylococci or streptococci, e.g. meningitis, otitis media,
 CC pneumonia, endocarditis, mastitis in cattle, abortion in horses and many
 CC others. Since the antibodies block binding of bacteria, they should be
 CC effective against antibiotic-resistant strains, and may replace
 CC antibiotic therapy or increase its effectiveness. Sequences W65659-68
 CC represent synthetic epitopes from the fibronectin binding domains DU and
 CC DL-D4 of the S. aureus fnbA gene.

 PT New human secreted proteins and coding sequences useful for treating
 PT disorders of the immune system and hyperproliferative disorders
 XX
 PS Disclosure: Page 119; 507pp; English.
 XX
 CC This sequence represents a secreted human protein encoded by the gene
 CC clone detailed in the descriptor line. The gene can be used to generate
 CC fusion proteins by linking to the gene to a human immunoglobulin Fc
 CC portion (e.g. X84924) for increasing the stability of the fused protein
 CC as compared to the human protein only.
 CC The invention relates to 125 novel genes and their fragments (nucleic
 CC acid sequences: X84933-X85057; amino acid sequences Y27567-Y27933) which
 CC are useful for preventing, treating or ameliorating medical conditions
 CC e.g. by protein or gene therapy. Also, pathological conditions can be
 CC diagnosed by determining the amount of the new polypeptides in a sample
 CC or by determining the presence of mutations in the new polynucleotides.
 CC Specific uses are described for each of the 125 polynucleotides, based on
 CC which tissues they are most highly expressed in (see X84933 for described
 CC uses).

 PT Multi-class hybrid interferon poly:peptide(s) - with restricted
 PT antiviral and cell growth regulatory activities
 XX
 PS Example: Fig 17; 61pp; English.
 CC The inventors claim a multiclass hybrid interferon polypeptide and a
 CC DNA unit having a nucleotide sequence which encodes it. Pref. the
 CC AA sequence consists of alpha and beta interferons. Pref. IF1 is
 CC (1) the 1-73 AA seq. of HuIFN-alpha-1 (and IF2 is the 74-166 AA seq.
 CC of HuIFN-beta-1) (see N30155, P30222); or (ii) the 1-41 AA seq. of
 CC HuIFN-alpha-61A (and IF2 is the 43-166 AA seq. of HuIFN-beta-1) (see
 CC N30160, P30227). Alternatively IF1 is the amino terminal end of a
 CC beta-IF and IF2 is the carboxy terminal of an alpha-IF (esp. the
 CC 1-73 seq. of HuIFN-beta-1 and the 74-167 seq. of HuIFN-alpha-1
 CC resp.) (see N30156, P30223). In the examples plasmids pGM5 and
 CC pDM101/trp/beta-1 and p-alpha-61A were used (see N30151, N30152,
 CC N30157). HinfI was used to digest the DNA sequences in the region
 CC of significant handicaps (see N30153, N30154, N30158, N30159), and
 CC the restriction fragments were ligated to form hybrid DNA.

 PT Multi-class hybrid interferon polypeptide(s) -

PT having sequence from interferon-alpha-1 and sequence from
 PT interferon-beta-1 for restricted activity
 XX
 XX
 PS Example: Fig 17; 24pp; English.
 CC Multi-class hybrid IFN polypeptides having an AA sequence composed
 CC of 2 distinct subsequences are claimed. The plasmids used in the
 CC construction of huIFN-alpha-61A-beta-1 hybrid are plasmids palpa61A and
 CC pDM101/trp/beta-1. Assembly of the palpa61A plasmid involved replacing
 CC the DNA fragment encoding the 23 AA signal polypeptide of preinterferon
 CC with a 120BP EcoRI/Sau3A promoter fragment E.coli trp promoter, operator,
 CC and trp leader ribosome binding site preoperator, encoding an ATG
 CC initiation codon and using HindIII site that was inserted, 59 nucleotides
 CC 3'-end of the TGA translational stop codon, to insert the gene into the
 CC plasmid pBM11 (a deriv of pBR322 having a deletion between the HindIII
 CC and PvuII sites). The complete DNA sequence of the promoter and gene
 CC fragments inserted between the EcoRI and HindIII sites of pBM11 is shown
 CC in n80049. The hybrid gene was constructed by taking advantage of the
 CC homologies between huIFN alpha-61A & huIFN beta-1 at around AA 40 of both
 CC proteins. The DNA sequence 5'-proximal to the DdeI restriction enzyme
 CC cutting site of the huIFN alpha-61A DNA is ligated to the DNA sequence
 CC 3'-proximal to the site of huIFN beta-1, to create a fusion of the
 CC two genes while preserving the translational reading frame of both.

CC protein (CERP) or HIV epitopes, but more generally against any pathogen,
 CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
 CC peptide immunogens may be used for prevention and/or treatment of
 CC infections (HIV, foot-and-mouth disease or malaria); for cancer
 CC immunotherapy; for inhibition of the action of interleukin hormone
 CC releasing hormone (LHRH) for contraception, treatment of hormone-
 CC dependent cancer, prevention of boar taint in meat, and
 CC immunocastration); for promoting the growth of animals; or for
 CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
 CC Th (functional in genetically diverse subjects) into an immunogen
 CC improves capacity to induce a strong T helper cell-mediated immune
 CC response, resulting in production of antibodies against a target antigen.
 CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
 CC Sequence Y91121 represents a promiscuous T helper epitope from the
 CC measles virus F (WVF) protein and sequences Y91122-Y91142, Y91226 and
 CC Y91245-Y91246 represent synthetic Th epitopes based on the WVF Th
 CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
 CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
 CC synthetic epitopes derived from this HBV epitope. Y91155-Y91196,
 CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
 CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
 CC antigenic peptide used in these LHRH antigenic peptides. Y91200 is
 CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising
 CC somatostatin and a Th epitope. Somatostatin immunogens may be used
 CC to promote growth in livestock. Y91208 is a human CD4 CDR2-like domain
 CC antigenic site, and Y91209-Y90211 are MVA Th epitope/CD4 CDR2
 CC antigenic peptides which may be used to prevent HIV infection of T
 CC cells. Y90212 is a modified version of a human IGE (Immunoglobulin
 CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IGE CH3 antigenic
 CC peptides which may be used in the treatment of allergies. Y91220 is
 CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
 CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
 CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
 CC Y91224-Y91225 comprise the CS antigen and an MVA Th epitope and may be
 CC used in a malaria vaccine. Y91228-Y91231 represent CERP-derived peptides
 CC and Y91232-Y91241 are immunogens comprising a CERP peptide and a Th
 CC epitope which may be used to prevent or treat arteriosclerosis and
 CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
 CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
 CC peptides comprising MVA Th and HIV-1 B-cell epitope which may be used as
 CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
 CC an immunostimulatory Invasin protein epitope from *Yersinia* species, and
 CC hinge spacer peptide, both of which may optionally be used in the
 CC antigenic peptides of the invention.

PT - avoids repeated administration of toxic drugs to lower cholesterol

PS Claim 5; Page 16; 26pp; English.

CC The sequences given in W24292-94 were used in the method of the

CC invention to stimulate an immune response to increase high density

CC lipoprotein (HDL) cholesterol in a mammal exhibiting low levels of

CC serum HDL. These peptides represent immunogenic epitopes of

CC cholesterol ester transfer protein (CERP). The method utilizes

CC the body's own immune system to lower CERP levels, thereby increasing

CC the level of beneficial HDL cholesterol, preferably in serum. The

CC method avoids the problems associated with the repeated administration

CC of drugs which have undesirable side effects. This peptide represents

CC a region of CERP which is common to both human and rabbit proteins.

 PS Claim 10; Page 62; 129pp; English.
 XX
 CC The invention relates to novel promiscuous T helper cell epitopes (Th),
 CC and immunogenic peptides comprising the Th epitopes of the invention
 CC along with B cell epitopes. The Th epitopes and peptide immunogens
 CC containing them, are used to induce a T helper cell response,
 CC specifically against Plasmodium falciparum, cholesterol ester transport
 CC protein (CEMP) or HIV epitopes, but more generally against any pathogen,
 CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
 CC peptide immunogens may be used for prevention and/or treatment of
 CC infections (HIV, foot-and-mouth disease or malaria); for cancer
 CC immunotherapy; for inhibition of the action of luteinising hormone
 CC releasing hormone (LHRH) for contraception, treatment of hormone-
 CC dependent cancer, prevention of boar taint in meat, and
 CC immunocastration); for promoting the growth of animals; or for
 CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
 CC Th (functional in genetically diverse subjects) into an immunogen
 CC improves capacity to induce a strong T helper cell-mediated immune
 CC response, resulting in production of antibodies against a target antigen.
 CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
 CC Sequence Y91121 represents a promiscuous T helper epitope from the
 CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
 CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
 CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
 CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
 CC synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
 CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
 CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
 CC antigenic peptide used in these LHRH antigenic peptides. Y91200 is
 CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising
 CC somatostatin and a Th epitope. Somatostatin immunogens may be used
 CC to promote growth in livestock. Y91208 is a human CD4 CDR2-like domain
 CC antigenic site, and Y91209-Y90211 are MWN Th epitope/CD4 CDR2
 CC antigenic peptides which may be used to prevent HIV infection of T
 CC cells. Y90212 is a modified version of a human IgE (immunoglobulin
 CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IgE CH3 antigenic

CC peptides which may be used in the treatment of allergies. Y91220 is
 CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
 CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
 CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
 CC Y91224-Y91225 comprise the CS antigen and an MWN Th epitope and may be
 CC used in a malaria vaccine. Y91228-Y91231 represent CEMP-derived peptides
 CC and Y91232-Y91241 are immunogens comprising a CEMP peptide and a Th
 CC epitope which may be used to prevent or treat arteriosclerosis and
 CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
 CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
 CC peptides comprising MWN Th and HIV-1 B-cell epitope which may be used as
 CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
 CC an immunostimulatory invasion protein epitope from *Yersinia* species, and
 CC hinge spacer peptide, both of which may optionally be used in the
 CC antigenic peptides of the invention.

PT
XX
PS Example; Page 111; 152pp; English.

The present invention describes an agonist (A) of apolipoprotein A-I (apoA-I) which is a 11-22 residue peptide, or analog, that forms an amphipathic alpha-helix in presence of lipids. (A), and their lipid complexes, are used to treat or prevent diseases associated with dyslipidemia, specifically hypercholesterolemia, cardiovascular disease, atherosclerosis, restenosis, HDL (high density lipoprotein) or apoA-I deficiency; hypertriglyceridemia and metabolic syndrome, also for treating septic shock. When labeled, (A) can also be used diagnostically to measure serum levels of HDL, in particular the HDL subpopulation that is involved in retrograde cholesterol transport, also to image HDL, at e.g. atherosclerotic streaks, and to raise antibodies Y18660 to Y18933 represent lecitin:cholesterol acyltransferase (LCAT) activity exhibiting core peptides, which are apoA-I agonists.

PT New human secreted proteins and coding sequences useful for treating
PT disorders of the immune system and hyperproliferative disorders
XX
PS Disclosure: Page 119; 507pp; English.
XX
CC This sequence represents a secreted human protein encoded by the gene
CC clone detailed in the descriptor line. The gene can be used to generate
CC fusion proteins by linking to the gene to a human immunoglobulin Fc
CC portion (e.g. X84924) for increasing the stability of the fused protein
CC as compared to the human protein only.
CC The invention relates to 125 novel genes and their fragments (nucleic
CC acid sequences: X84933-X85057; amino acid sequences Y27567-Y27933) which
CC are useful for preventing, treating or ameliorating medical conditions
CC e.g. by protein or gene therapy. Also, pathological conditions can be
CC diagnosed by determining the amount of the new polypeptides in a sample
CC or by determining the presence of mutations in the new polynucleotides.
CC Specific uses are described for each of the 125 polynucleotides, based on
CC which tissues they are most highly expressed in (see X84933 for described
CC uses).

PT Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial
PT infection, especially by Staphylococci and Streptococci
XX
PS Example 8; Page 101; 201pp; English.
XX
CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) Isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) Fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding
CC the isolated peptide of (1). Antibodies, the isolated peptides of
CC (1) and the nucleic acids are all useful for immunisation (active or
CC passive) and (by inhibiting binding of bacteria to fibronectin) for
CC preventing or treating infection in humans or other animals, particularly
CC by staphylococci or streptococci, e.g. meningitis, otitis media,
CC pneumonia, endocarditis, mastitis in cattle, abortion in horses and many
CC others. Since the antibodies block binding of bacteria, they should be
CC effective against antibiotic-resistant strains, and may replace
CC antibiotic therapy or increase its effectiveness. Sequences W65670-90
CC represent a series of synthetic peptides based on the D3 repeat of
CC S. aureus fibronectin binding protein A. They were synthesised to contain
CC a proline residue at each position through the sequence (le a proline
CC scan).

PT Multi-class hybrid interferon poly(peptide)s - with restricted
PT antiviral and cell growth regulatory activities
PS
PS Example: Fig 17; 61pp; English.
XX
CC The inventors claim a multiclass hybrid interferon polypeptide and a
CC DNA unit having a nucleotide sequence which encodes it. Pref. the
CC AA sequence consists of alpha and beta interferons. Pref. IF1 is
CC (i) the 1-73 AA seq. of HuIFN-alpha-1 (and IF2 is the 74-166 AA seq.
CC of HuIFN-beta-1) (see N30155, P30222); or (ii) the 1-41 AA seq. of
CC HuIFN-alpha-61A (and IF2 is the 43-166 AA seq. of HuIFN-beta-1) (see
CC N30160, P30227). Alternatively IF1 is the amino terminal end of a
CC beta-1F and IF2 is the carboxy terminal of an alpha-1F (esp. the
CC 1-73 seq. of HuIFN-beta-1 and the 74-167 seq. of HuIFN-alpha-1
CC resp.) (see N30156, P30223). In the examples plasmids pGWS and
CC pDM101/1trp/beta-1 and p-alpha-61A were used (see N30151, N30152,
CC N30157). HinfI was used to digest the DNA sequences in the region
CC of significant handicaps (see N30153, N30154, N30158, N30159), and
CC the restriction fragments were ligated to form hybrid DNA.

XX	
PS	Example; Fig 17; 24pp; English.

Example; Fig 17; 24pp; English.

Multi-class hybrid IFN polypeptides having an AA sequence composed of 2 distinct subsequences are claimed. The plasmids used in the construction of huIFN-alpha-61A-beta-1 hybrid are plasmids pAlpha61A and pDM101/trp/beta-1. Assembly of the palpalpA plasmid involved replacing the DNA fragment encoding the 23 AA signal polypeptide of preinterferon with a 120bp EcoRI/Sau3A promoter fragment E.coli trp promoter, operator, and trp leader ribosome binding site preceptor, encoding an AUG initiation codon and using HindIII site that was inserted, 59 nucleotides 3'-end of the TGA translational stop codon, to insert the gene into the plasmid pDM1 (a deriv of pBR322 having a deletion between the HindIII and PvuII sites). The complete DNA sequence of the promoter and gene fragments inserted between the EcoRI and HindIII sites of pDM1 is shown in n80049. The hybrid gene was constructed by taking advantage of the homologies between huIFN alpha-61A & huIFN beta-1 at around AA 40 of both proteins. The DNA sequence 5'-proximal to the DdeI restriction enzyme cutting site of the huIFN alpha-61A DNA is ligated to the DNA sequence 3'-proximal to the site of huIFN beta-1, to create a fusion of the two genes while preserving the translational reading frame of both.

CC protein (CEP) or HIV epitopes, but more generally against any pathogen.
 CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
 CC peptide immunogens may be used for prevention and/or treatment of
 CC infections (HIV, foot-and-mouth disease or malaria); for cancer
 CC immunotherapy; for inhibition of the action of interleukin hormone
 CC releasing hormone (LHRH) for contraception, treatment of hormone-
 CC dependent cancer, prevention of boar taint in meat, and
 CC immunocastration); for promoting the growth of animals; or for
 CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
 CC Th (functional in genetically diverse subjects) into an immunogen
 CC improves capacity to induce a strong T helper cell-mediated immune
 CC response, resulting in production of antibodies against a target antigen.
 CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
 CC Sequence Y91121 represents a promiscuous T helper epitope from the
 CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
 CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
 CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
 CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
 CC synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
 CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
 CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
 CC antigenic peptide used in these LHRH antigenic peptides. Y91200 is
 CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising
 CC somatostatin and a Th epitope. Somatostatin immunogens may be used
 CC to promote growth in livestock. Y91208 is a human CD4 CD82-like domain
 CC antigenic site, and Y91209-Y90211 are MVF Th epitope/CD4-CD82
 CC antigenic peptides which may be used to prevent HIV infection of T
 CC cells. Y90212 is a modified version of a human IGE (immunoglobulin
 CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IgE CH3 antigenic
 CC peptides which may be used in the treatment of allergies. Y91220 is
 CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
 CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
 CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
 CC Y91224-Y91225 comprise the CS antigen and an MVF Th epitope, and may be
 CC used in a malaria vaccine. Y91228-Y91231 represent CEP-derived peptides
 CC and Y91232-Y91241 are immunogens comprising a CEP peptide and a Th
 CC epitope which may be used to prevent or treat arteriosclerosis and
 CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
 CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
 CC peptides comprising MVF Th and HIV-1 B-cell epitope which may be used as
 CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
 CC an immunostimulatory Invasin protein epitope from Yersinia species, and
 CC hinge spacer peptide, both of which may optionally be used in the
 CC antigenic peptides of the invention.

 PT Stimulating an immune response to increase high density lipoprotein
 PT - avoids repeated administration of toxic drugs to lower cholesterol
 PT ester transfer protein levels
 XX
 PS Claim 5; Page 16; 26pp; English.

CC The sequences given in W24292-94 were used in the method of the
 CC invention to stimulate an immune response to increase high density
 CC lipoprotein (HDL) cholesterol in a mammal exhibiting low levels of
 CC serum HDL. These peptides represent immunogenic epitopes of
 CC cholesterol ester transfer protein (CEP). The method utilizes
 CC the body's own immune system to lower CEP levels, thereby increasing
 CC the level of beneficial HDL cholesterol, preferably in serum. The
 CC method avoids the problems associated with the repeated administration
 CC of drugs which have undesirable side effects. This peptide represents
 CC a region of CEP which is common to both human and rabbit proteins.

PS	Claim 10; Page 50; 129pp; English.	
XX		
CC	The invention relates to novel promiscuous T helper cell epitopes (Th),	
CC	and immunogenic peptides comprising the Th epitopes of the invention	
CC	along with B cell epitopes. The Th epitopes and peptide immunogens	
CC	containing them, are used to induce a T helper cell response,	
CC	specifically against Plasmodium falciparum, cholesteryl ester transport	
CC	protein (CEMP) or HIV epitopes, but more generally against any pathogen,	
CC	immunoreactive self-antigen or tumour antigen. The Th epitopes and	
CC	peptide immunogens may be used for prevention and/or treatment of	
CC	infections (HIV, foot-and-mouth disease or malaria); for cancer	
CC	immunotherapy; for inhibition of the action of luteinizing hormone	
CC	releasing hormone (LHRH) for contraception, treatment of hormone-	
CC	dependent cancer, prevention of boar taint in meat, and	
CC	immunocastration); for promoting the growth of animals; or for	
CC	treating allergies or arteriosclerosis. Incorporation of a promiscuous	
CC	Th (functional in genetically diverse subjects) into an immunogen	
CC	improves capacity to induce a strong T helper cell-mediated immune	
CC	response, resulting in production of antibodies against a target antigen	
CC	Th can replace carrier proteins and pathogen-derived T helper epitopes.	
CC	Sequence Y91121 represents a promiscuous T helper epitope from the	
CC	measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and	
CC	Y91245-Y91246 represent synthetic Th epitopes based on the MWF Th	
CC	epitope. Sequence Y91143 represents a promiscuous Th epitope from	
CC	hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are	
CC	synthetic epitopes derived from this HBV epitope. Y91156-Y91196,	
CC	Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH	
CC	sequence, joined to a promiscuous Th epitope. Y91197 is the LHRH target	
CC	antigenic peptide used in these LHRH antigenic peptides. Y91200 is	
CC	somatostatin, and Y91201-Y91207 are antigenic peptides comprising	
CC	somatostatin and a Th epitope. Somatostatin immunogens may be used	
CC	to promote growth in livestock. Y91208 is a human CD4 CD82-like domain	
CC	antigenic site, and Y91209-Y90211 are MWF Th epitope/CD4 CD82	
CC	antigenic peptides which may be used to prevent HIV infection of T	
CC	cells. Y90212 is a modified version of a human IgE (immunoglobulin	
CC	E) CH3 domain, and Y90213-Y90219 are Th epitope/IgE CH3 antigenic	

CC	peptides which may be used in the treatment of allergies. Y91220 is
CC	a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
CC	protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
CC	is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
CC	Y91224-Y91225 comprise the CS antigen and an MVE Th epitope and may be
CC	used in a malaria vaccine. Y91226-Y91231 represent CERP-derived peptides
CC	and Y91232-Y91241 are immunogens comprising a CERP peptide and a Th
CC	epitope which may be used to prevent or treat arteriosclerosis and
CC	cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
CC	B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
CC	peptides comprising MVE Th and HIV-1 B-cell epitope which may be used as
CC	a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
CC	an immunostimulatory invasive protein epitope from <i>Yersinia species</i> , and
CC	hinge spacer peptide, both of which may optionally be used in the
CC	antigenic peptides of the invention.

XX	
CC	The invention relates to novel promiscuous T helper cell epitopes (Th),
CC	and immunogenic peptides comprising the Th epitopes of the invention
CC	along with B cell epitopes. The Th epitopes and peptide immunogens
CC	containing them, are used to induce a T helper cell response,
CC	specifically against Plasmodium falciparum, cholesteryl ester transport

CC This sequence represents an immunogenic fragment of the rabbit
 CC cholesterol ester transferase protein (CETP).
 CC The invention relates to recombinant DNA vaccines that contain DNA
 CC encoding CETP, which can be used for producing antibodies to lessen the
 CC transfer of cholesterol esters from high density lipoprotein (HDL). The
 CC method can provide an autogenic immunological process for lessening the
 CC transfer of cholesterol esters from HDL particles and for increasing the
 CC HDL cholesterol concentration of a mammal whose blood also contains
 CC CETP. The method may be useful in treating human pro-atherogenic
 CC dyslipoproteinaemias characterised by low HDL/LDL cholesterol ratios. The
 CC method can have an effect that lasts for months as compared to the
 CC short-term effects of the small molecule drugs now available.

 PT Multi-class hybrid interferon polypeptide(s) - with restricted
 PT antiviral and cell growth regulatory activities
 XX
 PS Example: Fig 17; 61pp; English.
 XX
 XX The inventors claim a multiclass hybrid interferon polypeptide and a
 CC DNA unit having a nucleotide sequence which encodes it. Pref. the
 CC AA sequence consists of alpha and beta interferons. Pref. IF1 is
 CC (1) the 1-73 AA seq. of HuIFN-alpha-1 (and IF2 is the 74-166 AA seq.
 CC of HuIFN-beta-1) (see N30155, P30222); or (11) the 1-41 AA seq. of
 CC HuIFN-alpha-61A (and IF2 is the 43-166 AA seq. of HuIFN-beta-1) (see
 CC N30160, P30227). Alternatively IF1 is the amino terminal end of a
 CC beta-IF and IF2 is the carboxy terminal of an alpha-IF (esp. the
 CC 1-73 seq. of HuIFN-beta-1 and the 74-167 seq. of HuIFN-alpha-1.
 CC resp.) (see N30156, P30223). In the examples plasmids pGMS and
 CC pDM101/trp/beta-1 and p-alpha-61A were used (see N30151, N30152,
 CC N30157). Hint1 was used to digest the DNA sequences in the region
 CC of significant handcaps (see N30153, N30154, N30158, N30159), and
 CC the restriction fragments were ligated to form hybrid DNA.

 PT Multi-class hybrid interferon polypeptide(s) -
 PT having sequence from interferon-alpha-1 and sequence from
 PT interferon-beta-1 for restricted activity
 XX
 PS Example: Fig 17; 24pp; English.
 XX
 XX Multi-class hybrid IFN polypeptides having an AA sequence composed
 CC of 2 distinct subsequences are claimed. The plasmids used in the
 CC construction of huIFN-alpha-61A-beta-1 hybrid are plasmids palpha61A and
 CC pDM101/trp/beta-1. Assembly of the palpha61A plasmid involved replacing
 CC the DNA fragment encoding the 23 AA signal polypeptide of preinterferon
 CC with a 120bp EcoRI/Sau3A promoter fragment E.coli trp promoter, operator,
 CC and trp leader ribosome binding site preoperator, encoding an ATG
 CC initiation codon and using HindIII site that was inserted, 59 nucleotides
 CC 3'-end of the TGA translational stop codon, to insert the gene into the
 CC plasmid pBW11 (a deriv of pBR322 having a deletion between the HindIII
 CC and PvuII sites). The complete DNA sequence of the promoter and gene
 CC fragments inserted between the EcoRI and HindIII sites of pBW11 is shown
 CC in n80049. The hybrid gene was constructed by taking advantage of the
 CC homologues between huIFN alpha-61A & huIFN beta-1 at around AA 40 of both
 CC proteins. The DNA sequence 5'-proximal to the DdeI restriction enzyme
 CC cutting site of the huIFN alpha-61A DNA is ligated to the DNA sequence
 CC 3'-proximal to the site of huIFN beta-1, to create a fusion of the
 CC two genes while preserving the translational reading frame of both.

PT Stimulating an immune response to increase high density lipoprotein
 PT - avoids repeated administration of toxic drugs to lower cholesterol
 PT ester transfer protein levels

XX Claim 5; Page 16; 26pp; English.

CC The sequences given in W24292-94 were used in the method of the
 CC invention to stimulate an immune response to increase high density
 CC lipoprotein (HDL) cholesterol in a mammal exhibiting low levels of
 CC serum HDL. These peptides represent immunogenic epitopes of
 CC cholesterol ester transfer protein (CERP). The method utilizes
 CC the body's own immune system to lower CERP levels, thereby increasing
 CC the level of beneficial HDL cholesterol, preferably in serum. The
 CC method avoids the problems associated with the repeated administration
 CC of drugs which have undesirable side effects. This peptide represents
 CC a region of CERP which is common to both human and rabbit proteins.

XX New nucleic acids encoding human secreted proteins - obtained from

PT cDNA libraries prepared from kidney, fetal kidney, dystrophic

PT muscle, muscle and heart tissue

XX Claim 34; Page 500-501; 622pp; English.

CC X40826 to X41093 represent 5' expressed sequence tags (ESTs) for human
 CC secreted proteins, and encode the proteins given in X01602 and
 CC Y11994 to Y12260, respectively. The proteins given represent the signal
 CC peptide and an N-terminal fragment of a secreted protein. The nucleic
 CC acid sequences can be used for producing secreted human gene products.
 CC They can also be used to develop products for diagnosis and therapy.
 CC The proteins obtained may have cytokine activity, cell
 CC proliferation/differentiation activity, haematopoiesis regulating
 CC activity, tissue growth regulating activity, reproductive hormone
 CC regulating activity, chemotactic/chemokine activity, haemostatic and
 CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
 CC activity, tumour inhibition activity or other activities. The products
 CC can be used in forensic, gene therapy and chromosome mapping procedures.
 CC The sequences can also be used for obtaining corresponding promoter
 CC sequences. The nucleic acids encoding the signal peptide can be used
 CC for directing extracellular secretion of a polypeptide or the insertion
 CC of a polypeptide into a membrane, or importing a polypeptide into
 CC a cell.

XX Sequence of interferon (HuIFN) -alpha-61A around amino acid 40.

CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
CC Th (functional in genetically diverse subjects) into an immunogen
CC improves capacity to induce a strong T helper cell mediated immune
CC response, resulting in production of antibodies against a target antigen.
CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
CC Sequence Y91121 represents a promiscuous T helper epitope from the
CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
CC epitope. Sequence Y91143 represents a promiscuous Th epitope from
CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
CC synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
CC antigenic peptide used in these LHRH antigenic peptides. Y91200 is
CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising
CC somatostatin and a Th epitope. Somatostatin immunogens may be used
CC to promote growth in livestock. Y91208 is a human CD4 CDR2-like domain
CC antigenic site, and Y91209-Y90211 are MVF Th epitope/CD4 CDR2
CC antigenic peptides which may be used to prevent HIV infection of T
CC cells. Y90212 is a modified version of a human IGE (immunoglobulin
CC E) CH3 domain, and Y90213-Y90219 are Th epitope/IGE CH3 antigenic
CC peptides which may be used in the treatment of allergies. Y91220 is
CC a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
CC protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
CC is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
CC Y91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be
CC used in a malaria vaccine. Y91228-Y91231 represent CERP-derived peptides
CC and Y91232-Y91241 are immunogens comprising a CERP peptide and a Th
CC epitope which may be used to prevent or treat arteriosclerosis and
CC cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
CC B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
CC peptides comprising MVF Th and HIV-1 B-cell epitope which may be used as
CC a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
CC an immunostimulatory Invasin protein epitope from Yersinia species, and
CC hinge spacer peptide, both of which may optionally be used in the
CC antigenic peptides of the invention.

PT New artificial T helper cell epitope and derived immunogens with target
PT antigenic site, for immunization against e.g. malaria, arteriosclerosis
PT or human immune deficiency virus -

PS Claim 10; Page 62; 129p; English.

XX The invention relates to novel promiscuous T helper cell epitopes (Th),
XX and immunogenic peptides comprising the Th epitopes of the invention
XX along with B cell epitopes. The Th epitopes and peptide immunogens
XX containing them, are used to induce a T helper cell response,
XX specifically against Plasmodium falciparum, cholesterol ester transport
XX protein (CERP) or HIV epitopes, but more generally against any pathogen,
XX immunoreactive self-antigen or tumour antigen. The Th epitopes and
XX peptide immunogens may be used for prevention and/or treatment of
XX infections (HIV, foot-and-mouth disease or malaria); for cancer
XX immunotherapy; for inhibition of the action of luteinizing hormone
XX releasing hormone (LHRH) for contraception, treatment of hormone-
XX dependent cancer, prevention of boar taint in meat, and
XX immunocastration; for promoting the growth of animals; or for
XX treating allergies or arteriosclerosis. Incorporation of a promiscuous
XX Th (functional in genetically diverse subjects) into an immunogen
XX improves capacity to induce a strong T helper cell mediated immune
XX response, resulting in production of antibodies against a target antigen.
XX Th can replace carrier proteins and pathogen-derived T helper epitopes.
XX Sequence Y91121 represents a promiscuous T helper epitope from the
XX measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
XX Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th
XX epitope. Sequence Y91143 represents a promiscuous Th epitope from
XX hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are
XX synthetic epitopes derived from this HBV epitope. Y91156-Y91196,
XX Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH
XX sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target
XX antigenic peptide used in these LHRH antigenic peptides. Y91200 is
XX somatostatin, and Y91201-Y91207 are antigenic peptides comprising
XX somatostatin and a Th epitope. Somatostatin immunogens may be used
XX to promote growth in livestock. Y91208 is a human CD4 CDR2-like domain
XX antigenic site, and Y91209-Y90211 are MVF Th epitope/CD4 CDR2
XX antigenic peptides which may be used to prevent HIV infection of T
XX cells. Y90212 is a modified version of a human IGE (immunoglobulin
XX E) CH3 domain, and Y90213-Y90219 are Th epitope/IGE CH3 antigenic
XX peptides which may be used in the treatment of allergies. Y91220 is
XX a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid
XX protein and Y91221-Y91222 comprise this peptide and a Th epitope. Y91223
XX is a Plasmodium falciparum circumsporozoite (CS) target antigen, and
XX Y91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be
XX used in a malaria vaccine. Y91228-Y91231 represent CERP-derived peptides
XX and Y91232-Y91241 are immunogens comprising a CERP peptide and a Th
XX epitope which may be used to prevent or treat arteriosclerosis and
XX cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising
XX B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic
XX peptides comprising MVF Th and HIV-1 B-cell epitope which may be used as
XX a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively
XX an immunostimulatory Invasin protein epitope from Yersinia species, and
XX hinge spacer peptide, both of which may optionally be used in the
XX antigenic peptides of the invention.

PT New artificial T helper cell epitope and derived immunogens with target
 PT antigenic site, for immunization against e.g. malaria, arteriosclerosis
 PT or human immune deficiency virus

PS Claim 10; Page 49; 129pp: English.

XX The invention relates to novel promiscuous T helper cell epitopes (Th),
 CC and immunogenic peptides comprising the Th epitopes of the invention
 CC along with B cell epitopes. The Th epitopes and peptide immunogens
 CC containing them, are used to induce a T helper cell response.
 CC Specifically against Plasmodium falciparum, cholesteryl ester transport
 CC protein (CETP) or HIV epitopes, but more generally against any pathogen,
 CC immunoreactive self-antigen or tumour antigen. The Th epitopes and
 CC peptide immunogens may be used for prevention and/or treatment of
 CC infections (HIV, foot-and-mouth disease or malaria); for cancer
 CC immunotherapy; for inhibition of the action of luteinising hormone
 CC releasing hormone (LHRH) for contraception, treatment of hormone-
 CC dependent cancer, prevention of boar taint in meat, and
 CC immunosuppression; for promoting the growth of animals; or for
 CC treating allergies or arteriosclerosis. Incorporation of a promiscuous
 CC Th (functional in genetically diverse subjects) into an immunogen
 CC improves capacity to induce a strong T helper cell-mediated immune
 CC response, resulting in production of antibodies against a target antigen.
 CC Th can replace carrier proteins and pathogen-derived T helper epitopes.
 CC Sequence Y91122 represents a promiscuous T helper epitope from the
 CC measles virus F (MVF) protein and sequences Y91122-Y91142, Y91226 and
 CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: CYTOCHROMES P450 ARE A GROUP OF HEME-THIOLATE
CC MONOOXYGENASES. IN LIVER MICROSOMES, THIS ENZYME IS INVOLVED IN AN
CC NADPH-DEPENDENT ELECTRON TRANSPORT PATHWAY. IT OXIDIZES A VARIETY
CC OF STRUCTURALLY UNRELATED COMPOUNDS, INCLUDING STEROIDS, FATTY
CC ACIDS, AND XENOBIOTICS.
CC -1- CATALYTIC ACTIVITY: RH + REDUCED FLAVOPROTEIN + O(2) = ROH +
CC OXIDIZED FLAVOPROTEIN + H(2)O.
CC -1- SUBCELLULAR LOCATION: MEMBRANE-BOUND. ENDOPLASMIC RETICULUM.

CC -1- SIMILARITY: BELONGS TO THE CYTOCHROME P450 FAMILY.
 DR PIR: A35704; A35704.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
